BizERP

EPC PROJECT MANAGEMENT SYSTEM

End-to-End Business Management Solutions for EPC Contractors

Get rid of formula errors and spending too much manpower on compliance.

Overview

In Engineering Procurement & Construction (EPC) firms, projects are constantly increasing in size and scope while competition keeps margins thin. Smoothly running projects can be thrown off schedule and become over budget – leaving project changes to erode those margins even further. Without comprehensive cost control, troubled construction projects can spiral out of control before anyone even recognizes a problem exists. Hence , engineering and construction firms face mounting pressure to adopt stringent project cost and earned value management processes to enable complete project transparency.

Key Advantages

Our BIZ ERP- EPC Project Management System can help EPC by controlling and managing their:

- Sales
- Projects,
- Employees
- Vendors.
- Uniform project execution and reporting.

Our project management software is one of the most trusted EPC software solution available in the country.

Challenges faced by EPC Companies

- Executing projects on-time and within budget
- Construction setbacks caused by delayed information, material, or equipment
- Disintegrated data and varying calculation methods
- Effectively tracking progress and retaining contingency plans
- Managing project progress in terms of installed quantities
- Keeping a track of escalating raw material costs

Solutions Provided by us

- Best practices for full lifecycle project management including end to end project management.
- Easily managing multiple projects at a time.
- Effectively manage budgets and resources allocated in a project.
- Effectively tracking project wise Planned VS Actual costs and as well as Planned VS actual time.
- Hierarchy wise approval chains and notification alerts which keeps transparency across all the stages of project management.
- Data integrity and trustworthy calculations for confident decision-making
- Tailored reports for every level and stakeholder
